

Office Reigns - App Summary

What It Is

Office Reigns is a local-first browser game inspired by Reigns where each week presents a workplace decision. Player choices shift four career pillars and determine whether they earn promotion or burn out.

Who It's For

Primary persona: individual contributors in corporate roles. The app supports role selection for Developer, Product Manager, Analyst, and Business Associate.

What It Does

- Runs week-by-week decision gameplay with two choices per card.
- Tracks four pillars (bandwidth, salary, reputation, life) with clamped values 0-100.
- Applies deterministic game rules for promotion and game-over outcomes.
- Seeds and stores card content locally in IndexedDB.
- Supports persona-aware and anti-repeat card selection with optional seeded RNG.
- Provides admin tools to list/edit/delete cards and configure promotion settings.
- Imports/exports cards as JSON for backup and bulk updates.

How It Works (Repo Evidence)

- UI layer: React + React Router routes '/' for gameplay and '/admin' for tooling.
- State layer: GameProvider (useReducer + effects) orchestrates init, decision, draw, and persistence.
- Engine layer: pure TypeScript modules (effects, gameState, promotion, cardSelector) compute outcomes.
- Persistence layer: idb-backed IndexedDB stores cards, current game state, and promotion settings.
- Data flow: Intro persona -> card drawn -> choice -> effects applied -> status checked -> state saved.
- External backend/API service: Not found in repo.

How To Run (Minimal)

1. Install dependencies: `npm install`
2. Start dev server: `npm run dev`
3. Open: `http://localhost:5173` (admin UI at /admin)
